

Internship Opportunity at Information Technology and Solutions Department

Highlights of the Internship Role:

By participating in system and application testing activities, the intern will gain practical exposure to software quality assurance, digital platforms, and IT workflows in a property development context. The internship provides hands-on experience in documentation, bug reporting, and testing processes across web and mobile applications.

- **Quality Assurance Contributions:** Document test cases, bug reports, and feedback logs to support system and application testing activities.
- **Testing & Evaluation Support:** Participate in structured testing procedures for web and mobile applications, identifying issues and logging results.
- **Documentation & Reporting:** Organise and update testing documents, ensuring accurate records of defects, observations, and test outcomes.

Requirements:

- Major in Information Technology, Computer Science, or a related discipline.
- Basic knowledge of web and mobile application concepts.
- Strong critical thinking and logical problem-solving skills.
- Detail-oriented, organised, and able to follow structured testing procedures.
- Interest in software testing, digital platforms, or IT systems in a business environment.
